POPCORN MICROGREEN
CANARY

CANARY is popcorn variety used for sprouting and microgreen production. **CANARY** produces bright yellow shoots with a very high sugar content which are a fun and tasty addition as a garnish to food dishes.

In order to achieve vibrant yellow colour and high sugars, **CANARY** needs to be germinated and grown free from any light and at a warm temperature of 17°C.

VARIETY FEATURES

- Vibrant yellow colour
- Upright, narrow leaf
- High sugar content.

AGRONOMIC CONSIDERATIONS

- Requires soil temperature of 17°C in order to germinate
- Complete darkness is required to achieve colour and flavour
- Soak seed before germinating.

PACK SIZES

500G, 5KG, 10KG
