

LETTUCE COS MIDI APACHE

APACHE is a midi cos for production in all but mid-summer when **MOJAVE** is preferred. **APACHE** can be used a single head presentation or for twin packing.

APACHE has high vigour for production in cool periods but also has very high tipburn tolerance when harvesting in spring. With an extensive disease package and a late to close style, the **APACHE** holds very well in the paddock allowing for flexibility of harvest.

APACHE is slightly larger than its sisterline **MOJAVE** but the two can be grown alongside each other during the shoulder period.

VARIETY FEATURES

- Mid green colour
- Midi sized cos
- Medium to high vigour.

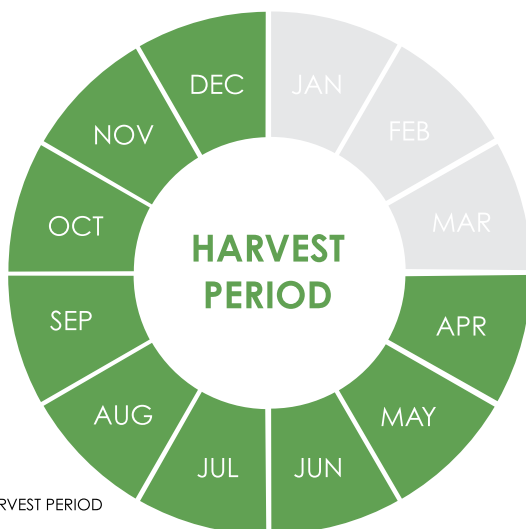

AGRONOMIC CONSIDERATIONS

- Whole head and twin pack production
- High tolerance to tipburn
- High tolerance to bolting.

PACK SIZES

1M, 5M, 25M, 100M

■ HARVEST PERIOD

The information provided here is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions, including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds (NZ) Ltd cannot accept liability as to accuracy of this information.

DISEASE RESISTANCES

High Resistance: Bl:1-40, Nr:0
