

# SPINACH DAGGER

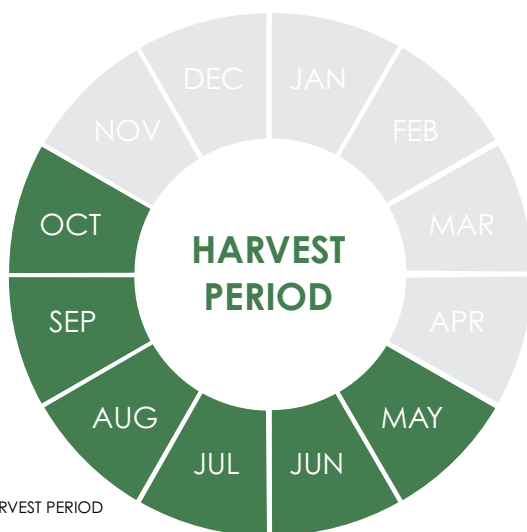

**DAGGER** is a cool and cold season spinach for use in babyleaf/ salad production. It is a very dark green colour and has high vigour, developing a thick leaf in the coldest of situations.

Being a very upright type **DAGGER** allows for ease of harvest when more European style spinach tend to hug the ground. **DAGGER** has a good disease package and shows very strong tolerance to yellowing under high rainfall.

**DAGGER** is best suited for late autumn/early winter and spring harvest but may be suited in more northerly areas for full winter harvest. **DAGGER** has a flatter leaf but becomes slightly savoyed the colder the conditions are.

**DAGGER** can also be used for bunching spinach where it is slightly slower than Black Glove to size but gives additional disease resistance.

HARVEST PERIOD

The information provided here is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions, including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds (NZ) Ltd cannot accept liability as to accuracy of this information.

## VARIETY FEATURES

- Dark green leaf
- Slight point oval leaf shape
- Very slight savoy.

## AGRONOMIC CONSIDERATIONS

- A hybrid variety
- Strong tolerance to bolting
- Strong tolerance to yellowing.

## PACK SIZES

100M, 500M, 1MM

## DISEASE RESISTANCES

High Resistance: Pe:1-17
