

MICROGREEN QUILL

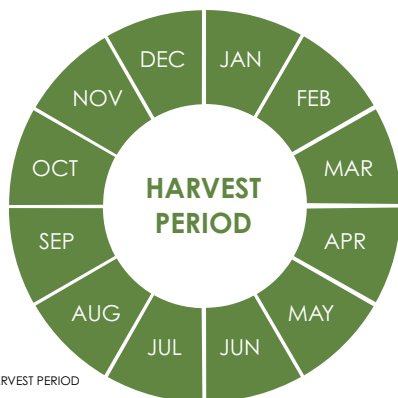

QUILL is a feather pea specifically bred for sprouting and microgreen production.

QUILL is a semi-leafless pea which produces a high number of tendrils and is ideal to add to salad mixes or as a garnish.

QUILL tends to produce a higher yield than the Avea, with slightly darker leaves.

This variety offers exceptional uniformity across the trays due to high seed vigour.

QUILL is ideally suited for use under cooler conditions. Under very warm and humid conditions the actual seed can deteriorate quickly due to the size of seed.

The information provided here is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions, including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds (NZ) Ltd cannot accept liability as to accuracy of this information.

VARIETY FEATURES

- Mid green cotyledons
- Mid green tendrils
- Mild pea flavour.

AGRONOMIC CONSIDERATIONS

Due to the seed size of this variety care needs to be taken under warm conditions to ensure the seed coat does not rot.

PACK SIZES

500G, 5KG, 10KG

Untreated seed

All our microgreen seeds are untreated.
